

FORMULA STUDENT NETHERLANDS

RESATO X FORMULA STUDENT NETHERLANDS

SPECIAL AWARD: RESATO HYDROGEN TECHNOLOGY INNOVATIVE SUPPLY CHAIN AWARD

Dear Teams,

The energy transition is an integral part towards a more sustainable and greener world. A green (hydrogen) economy can only be achieved by uniting energy production, distribution, infrastructure and society. Resato Hydrogen Technology and Formula Student Netherlands want to challenge you in the coming years to implement a more sustainable supply chain by introducing a special challenge: The Resato Hydrogen Technology Innovative Supply Chain Award.

Starting this edition, in 2024, teams can enter a special competition by presenting their innovative supply chain solutions around the production and logistics of their organization. At Formula Student Netherlands 2024, you may enter the challenge by submitting a 1-page document. The best entries will be judged on Wednesday July 17th by a special judging panel from Resato Hydrogen Technology. See details on the next page.

In addition to the challenge, Resato Hydrogen Technology will host an exciting event on Wednesday July 17th with Panel Discussions, Meet & Greets and Company Presentations.
